

# *Mailmaster 465*

## *Modular Envelope Inserter*

The Mailmaster 465 handles DL to oversized C4 envelopes, inserting at speeds of up to 6,000 completed envelopes per hour. This comprehensive, modular, multi-format enveloping system offers flexibility, durability and ease of set up.

The insert stations can handle a wide variety of material up to 7mm thick, including single sheets, card, reply envelopes, pre-folded items, stapled sets, CDs and booklets. A KAS Fast Sheet Feeder can be placed in line as the primary document feeder, which feeds, reads and accumulates variable page sets before folding as required. The unique insertion system positively guides the documents into the envelopes. All feeders are top load for ease of filling and continuous running.

A pivoting touch screen is used to control the machine's operation. Reporting software is available. Reading technology can also be added for matching and verification.
